

CASE STUDY

Gov't and Military Installations Domestic and Worldwide

Over 10,000 Units

E PLURIBUS UNUM

“When we tested the Airius product we found that it did everything that it claimed it would do. Basically the Airius product proved to be vastly superior to any other product tested. To date, our company has installed over 900 Airius units at Ellsworth and Minot [Air Force Bases]. In the near future we will be installing several hundred additional units and expanding our installation program to other like facilities.” – **Chuck Miller, Energy Rep, Bitter Creek Pipelines**

“We installed them [Air Pears with PHI] in an existing jail pod with 73 full-time occupants. The odors in that area were extremely bad. We let the fans run for about two weeks and conducted a basic survey with the guards that attend that pod most frequently. Our survey came back with results showing a positive change in the air quality. I personally walked the area before and after the installation many times and noticed a significant change. Our next test was to turn off the fans without notifying anyone. There was an immediate request from the guards to have the fans turned back on. So we did and they were very happy....I am confident you will be more than pleased with these products and can honestly say that working with all of the people at Airius has been a real pleasure. Considering I work for a local government, it is only in my better interest to implement products that are a rock solid investment.” – **Greg Billings, Building Automation/Energy Management Design, Boulder County Architect Office, Colorado**

Airius has supplied more than 10,000 units for the U.S. government and military, internationally and domestic, in hangars, drill halls, gyms, pools, jails, maintenance garages, workshops, etc, at:

- NELLIS AFB
